

Humans are designed to see what they are already looking for and believe in. My focus on high-expectation gun owners and my desire to delight shooting enthusiasts requires that I practice abundant thinking in order to reset customer expectations. I don't build many guns, but I build them perfect and unique. My quality is fixed but I am flexible on customer design details. My designs are bold but elegant. I am daring in new designs because I trust in my ability.

Bolt action rifles are the most common type of firearm given features such as magazine capacity, quick loading and single barrel functionality. My custom bolt action rifles are handcrafted to the highest level of quality and functionality. I use exhibition grade stocks and the engraving is focused on the magazine plate, pistol grip and the action.

The photo of the 8x68S reveals how I hand craft a rifle design to give a bold but elegant statement. The rib on this rifle and the barrel are from the same piece of material. The engraving is an artist's journey and story, see the leopard footprints engraved down extended trigger guard.

My focus on high-expectation gun owners and my desire to delight shooting enthusiasts requires that I practice abundant thinking in order to reset customer expectations. I don't build many guns, but I build them perfect and unique. My quality is fixed but I am flexible on customer design details. My designs are bold but elegant. I am daring in new designs because I trust in my ability.

Break-down rifles can be produced light and elegant, my 2 key design drivers. These guns, like double rifles, have a large surface around the action for engraving. I invest much of my time and skills in break-down guns because they give me greater opportunity

to differentiate and stand out from the crowd. For example, the breakdown gun pictured below is a round body action that weighs 2kg without a scope and is easy to shoot. There is simply no other design like it. All my guns shoot sub MOA at 100m.
